

**Instruction Sheet**  
**Oil Filter Kit**

**E184H D450**

---

Special note for gasket kits for Detroit Diesel Medium Duty DD5 engines

Please note that the gasket kit for this oil filter contains two extra sealing washers. They need to be replaced at the oil drain plug on the oil pan. However, there is only one washer required. In order to make sure to install the right sealing washer, please compare the size of the washer you are replacing to the size of the washers in the gasket kit.

For early DD5 engines one must use the M20 sealing washer, whereas later DD5 engines require the M22 sealing washer.
